

HackerRank Coding Assessment Instructions

Overview

You will be given **3 hours** to complete the HackerRank assessment. It will consist of both **coding assessments** and **multiple choice** questions.

The exam is **timed** and evaluated using **automated tests**.

Your primary goal is to **pass the tests**, not to add extra functionality or redesign the application.

Environment Setup / Technical Setup & Interface

When you open a coding portion of the exam, HackerRank will automatically install and set up your application.

Once setup is complete, you will see:

- A **Preview** of the application on the right side of the screen.
 - The **Question Description** on the left side.
 - A **Folder Icon** above the question description that contains all project files.
-

Running and Testing Your Code VERY IMPORTANT

You can run the application by clicking “**Run**” in the **upper-right corner**.

You **must** click “**Run Tests**” to test and validate your solutions against the assessment tests.

 **If your app is broken, NO TESTS WILL BE RUN!**

This means:

- If your code breaks the application, **no tests will pass**, even if parts of your logic are correct.
- If the assessment checks **10 requirements** and you implement **9 correctly**, but your app does not run, **you will receive zero credit**.

✅ Always ensure the application is **running before submitting**, even if you did not complete every part of the question.

Strict Do's and Don'ts

✅ Do:

- Focus only on what **the tests are checking**.
- Focus on **passing the tests, nothing extra**.
- Make sure the app **runs without errors at all times**.
- Follow the instructions **exactly as written**.
- Match the **specification precisely** (including **HTTP status codes, validation rules, and edge cases**).

❌ Do NOT:

- Do **not** add extra features beyond the requirements.
 - Do **not** rename or remove any files.
 - Do **not** change variable names, attribute names, or **data-test-ids**.
 - Do **not** add new tools or dependencies. Use only what's in the environment.
 - Do **not** modify anything unless **explicitly instructed** to do so.
 - Do **not** refresh/close the browser during the test unless **instructed**.
-

Test Rules & Conduct

- The test is **timed and cannot be paused**.
 - Your **screen will be monitored**. Follow **all instructions**.
 - Do **not** switch tabs or applications during the test.
 - Do **not** open other screens, search online, or access external documents/tools.
 - Do **not** use **AI assistants**, code-generation tools, messaging apps, or external help of any kind.
 - Any attempt to **copy/paste solutions, share code, or circumvent the environment** is considered **cheating** and may lead to **disqualification**.
-

Time Management Tips

- Start with **simpler problems** to secure points early.
 - Do **not** get stuck on one task. **Move on and return if needed.**
 - Leave **buffer time at the end** to verify the app runs and **re-run tests**.
-

Practical Workflow (Recommended)

- **Read** the problem and constraints carefully.
 - Implement **minimal, correct logic** that targets the tests.
 - Click **Run** to confirm the app builds and runs.
 - Click **Run Tests** to validate against the assessment's test suite.
 - **Fix failures**, re-run tests, and keep the app **running**.
 - Submit only when tests pass (**or as many as possible**) and the app is **stable**.
-

Final Reminder

Your score is based entirely on **test results**.

A **partially correct solution that runs** is better than a “**complete**” solution that breaks the app.

Make sure the app **runs**, use **Run Tests**, **avoid tab switching or external tools**, and **submit before time runs out**.
